Re: **Water Test Results**

Dear John,

In our conversation this date, I was more than pleased to report the distilled water from the Electron 4 machine cleared up a tank containing 225 gallons of my mineral drink product. I purposely retained this material in order to do this test. 1% of your distilled water agitated into the tank contents and then incubated for five days brought our product back to well within our quality control standards. As the independent lab report shows, (below) we started with a total plate count of 6000 cfu's / ml on 2/6/06 . Our QA std is <10. On 2/17/06 , we received a 10 gallon shipment of the Electron 4 distilled water. I immediately inoculated the 225 gallons of product with the water only, **NOTHING ELSE WAS ADDED!!**

Five days later as the lab report shows, the test was completed and our product is again within our QA std. I have heard stories like this and have been only a half-hearted believer but always with an open mind. Now that my own test proves conclusively the validity of the verbal reports, I have decided that from this point forward, all our liquid products will be manufactured utilizing the marvelous water produced by your Electron water processors. I am, as of this date, preparing our budget to include the purchase of 5-10 of the Electron 5 units within the next several months. My hat is off to you John, thank you for your marvelous contribution to the Health and Welfare of mankind!

Yours Truly,

Samuel F. Curtis Jr. CEO
Organa International Corp.

PROOF AGAIN!! EVEN THE "PUREST WATER" SPREADS DISEASE TO MILLIONS OF PEOPLE WORLDWIDE! THOUSANDS OF "UNTREATABLE" WELLS AND WASTE LAGOONS HAVE BEEN DONE USING OUR MACHINES!

Certificate of Analysis for Electron 4 & 5 Water Machine

<i>Service</i>	<i>Method</i>	<i>Company</i>	<i>Received</i>	<i>Completed</i>
Micro – TPC, YM	AOAC	Organa International	2/06/06	2/13/06

Analysis Performed

Micro – TPC, YM	AOAC	Organa International	2/17/06	2/22/06

Take the purest water and let it incubate with 6000 cfu's bacteria/ml, for 5 days. The bacteria count will skyrocket to 1,000,000 cfu's/ml or more!! Instead the total plate count went below 10 cfu's/ml their quality control standard!! This proves again, our water kills pathogens when the purest water won't! [This is an amazing discovery with world wide implications!](#)
